

Product information

Plant sticks

Special PE-coating:

An environmentally friendly plastic coating, UV treated for extra long lifetime. The coating can be exposed to extreme weather conditions, hot and cold temperatures: it will not crack or lose its protective characteristics.

Watertight sealed tops:

The tops are hermetically sealed. No water can enter the plant sticks, no rust can form and they cannot rot in the ground. Plant sticks cannot harm plants, unlike natural plant support, where humidity can enter and mould or rot could infect plants and trees.

Ribbed surface:

Special surface spurs offer extra grip for young plants or shoots. They will encourage plant growth.

Pointed tips:

One end of the stake is pointed for easy insertion into the ground.

EAN-Code:

fleur ami plant sticks can be delivered with a clear EAN barcode for optimal readability in shops.

Available in various sizes with different diameters (8, 11, 16 and 20mm) and lengths (from 60 to 300cm)
